

FLOAT GLASS FUSING COLORS

We have a new line of colored frit, powder and confetti specifically formulated to fit commonly available float glass. Now you have the advantage of using inexpensive float glass together with colors for fusing and slumping applications. Advantages? Incredibly large sheet sizes available, up to 20' single sheets! Up to 1" thick, crystal clear and technically perfect sheets. Sheet glass cost can be 80 to 90% LESS than regular fusible glass. As always, we recommend testing for compatibility for your particular application. Please inquire for pricing if you need quantities over 40 kilos. 1 kilo = 2.2 pounds. COE is 83+/- 3. Available in -0 powder (0.0 -0.25mm), 2 (0.25 mm - 1.0 mm), 3 (1.0mm -2.5mm) frits and confetti. Full fuse temp 1560F, tack fuse temp 1430F, annealing temp 970F. Float glass colors contain lead and cadmium.
