

BULLSEYE GLASS

C&R Loo stocks the complete line of all Bullseye products including frits, colored stringer, dichroic stringer, lamp working rods, casting glass, dichroic sheets and fusible and non-fusible thin and standard sheet glasses.

TESTED COMPATIBLE: Bullseye tests all its glass for compatibility. Glass that is "Tested Compatible" (F) will fuse without unacceptable stress to any other Bullseye glass which is also marked "Tested Compatible."

BULLSEYE STANDARD SHEET GLASS 1/8"

Bullseye's standard sheet glass is single available in single (-F) and double rolled -(30F) sheets. This method of hand-casting results in a highly glossy, slightly wavy top surface and a texture on the underside of the sheet which is slightly dimpled. Double rolled is flatter and has less seeds than single rolled.

BULLSEYE GLASS (continued)

BULLSEYE IRIDESCENTS

The iridescent coating on Bullseye glasses is created by applying a fine metal chloride mist to the glass sheet while it is still semi-molten. While still pliable, the sheet is stretched to break the thin surface coating and impart the characteristically matte finish that distinguishes Bullseye irids.

Unlike more common iridescent coatings, Bullseye's will withstand full fusing temperatures and is well suited for kiln forming techniques. The coating is non-toxic and presents no health or safety hazard when used for food bearing surfaces.

BULLSEYE THIN SHEET GLASS 1/16"

Bullseye's "Thins" are half the thickness of the standard sheet glass. The smaller size (17" x 20") and light weight (2.2 lbs.) make these sheets easy handle, pack and ship. Thins are exceptionally easy to cut and allow great flexibility in detail work whether for fusing or traditional usages.

Thin rolled sheets are twice the price per pound (approximately the same price per square foot) as standard sheet glass.

CONFETTI

Confetti are paper-thin shards of blown glass. The color saturation and opalescence of these glasses is much greater than that of sheet glass, but due to their extreme thinness they appear very light with an almost paper or film-like quality. Confetti is currently available in 12 colors and sold by the pound. Confetti are never labelled as Tested Compatible because, while they are tested for compatibility at the factory, they are not subjected to standards as tight as those for sheet glass and frits. Confetti are made to be used in thin sections and should not be heavily layered without additional testing. Confetti is available in 1 pound containers and in 4 oz jars. All Bullseye 1lb Confetti jars may be mixed for quantity discounts. All Bullseye 4oz Confetti jars may be mixed for quantity discounts. To order 4 oz confetti jars, add SJ to end of part number.

STREAKIES

Although originally designed for traditional stained glass, Bullseye Streakies are frequently used in fusing and other kilnforming applications. They are a combination of opalescent or transparent and opalescent glasses. Glass colors are listed in order of proportion within the sheet, the first color being predominant. All colors not indicated as opals are transparent.

RING MOTTLES

The characteristic ring of opalescence in this unique glass results from a combination of glass formulation and forming method. The molten glass must chill momentarily before reheating to cause the rings to form. Time and temperature are critical and minute adjustments on the casting table and in the reheating chamber require extreme skill and concentration by the glassmakers.

BULLSEYE FRITS & POWDERS

Bullseye frits are made from crushed, screened and cleaned Tested Compatible glass. They are only available as Tested Compatible. Frits have many kiln working applications including casting, pate de verre, and "frit painting". Bullseye offers colors in transparent and opalescent frits, and each color is available in 3 different grain sizes. Frits are sold by the pound and packed in plastic bags or 5 lb jars.

GRAIN SIZES ARE AS FOLLOWS:

POWDER SIZE 08 Grain size is under 0.2mm **FINE** SIZE 01 Grain size is between 0.2mm and 1.2mm
MEDIUM SIZE 02 Grain size is between 1.2mm and 2.7mm **COARSE** SIZE 03 Grain size is between 2.7mm and 5.15mm
 Frits available in size 01, 02, and 03. Prices per pound. Please contact us if you wish to purchase over 40 lbs.

BULLSEYE GLASS (continued)

STRINGERS 1MM & 2MM

Stringers are threads of glass which have been pulled from remelted Bullseye sheet glass. They may be tack-fused to make fabric-like sheets or torch-worked over a candle flame to create fine-lined designs for subsequent fusing onto a sheet. 07 stringers measure 0.7 to 1.2MM in diameter, 08 stringers are 2mm in diameter and are approximately 1/2" shorter than the tubes in which they are packaged. Clear plastic tubes are 3/4" in diameter and available in 18" length. Approximately 200 stringer in a tube. To order 2mm stringers, replace -07 in code with -08.

THE LAMP PACK

Light you your lamp classes with this classy collection.

A treasure chest for lampmakers and retailers. Open this little crate in your next lamp class - watch your students learn to love a quality art glass. Solid and streaky opalescents with the characteristic Bullseye "Catspaw" glow. Ring mottels and fracture streamers for naturalistic floral and leaf representations. Iridescent for subtle satin glints. Each pack has a good selection of flower, leaf & background glasses. Every 9" x 12" piece of glass is individually labeled for your easy reference. The 12 page mini catalog which accompanies each case offers technical tips, manufacturing information, design suggestions and more. Approximately 50 pieces of Bullseye glass selected especially for lamp usage. Each piece 9" x 12". That's over 50 lbs or about 38 square feet.

THE PANEL PACK

Irresistable colors and textures to enhance the home.

Stained glass window panels add warmth and interest to homes. Inspire your students with real art glass by opening this little crate at your next stained glass class. They can select from a pleasing assortment of glasses: lively catspaw opalescents, shimmering iridescents, vivid jeweltone cathedrals, daring fractures and streamers and pale transperants with our subtle hand rolled texture. Every 9" x 12" piece of glass is individually labeled for your easy reference. The 12 page mini-catalog which accompanies each case offers technical tips, manufacturing information, design suggestions and more. After the glass is gone you'll use the sturdy pine crate over and over for display and storage.

Over 50 pieces of Bullseye glass selected especially for panel usage. Each piece 9" x 12". That's over 50 lbs or about 38 square feet.
